

PRESS RELEASE – Data Republic Achieves ISO 27001:2013

Data Republic recently achieved the ISO 27001:2013 certification, the international standard on how to manage information security. The standard was originally published jointly by the International Organization for Standardization (ISO) and the International Electrotechnical Commission (IEC) in 2005 and was then revised in 2013. This certification details requirements for establishing, implementing, maintaining and continually improving an information security management system (ISMS), the aim of which is to help organizations make the information assets they hold more secure.

Information Security Management System, ISMS, is an overarching framework through which management identifies, evaluates and addresses the organization's information risks. The ISMS ensures that the security arrangements are fine-tuned to keep pace with changes to the security threats, vulnerabilities and business impacts.

“Data Republic’s mission is to help organizations unlock the potential of the world’s data with trust and transparency,” says Richard Lane, Head of Security and Risk at Data Republic. “Achieving ISO 27001:2013 certification is an important milestone for us, allowing our customers to verify our security controls against a widely known standard for keeping information assets secure.”

Now ISO 27001:2013 certified, your organization can benefit from Data Republic’s governed access workflows, data license agreements and secure analytics workspaces using the cloud-based Data Sandbox. Discover how the Data Sandbox makes it easier and safer for clients to connect their high-value data with innovators outside their four walls.
