5 January 2021

DATA REPUBLIC NOW AVAILABLE ON AWS MARKETPLACE

Data Republic, a global leader in secure data sharing, today announced customers can now purchase its Data Sandbox product through AWS Marketplace. AWS Marketplace is a digital catalog with software listings from independent software vendors across the world that make it easy to find, test, buy, and deploy software like Data Republic's Data Sandbox that runs on Amazon Web Services (AWS).

The Data Sandbox makes it easy for digital, innovation, and analytics leaders to connect their data with outside people, apps and algorithms, safely and securely. Data Republic's move to make Data Sandbox available on AWS Marketplace was in response to customer demands for an easier, more seamless way to start using the Data Sandbox.

As an AWS Advanced Technology Partner, Data Republic has invested in the collaboration with AWS to better service enterprise customers who want to derive more value from their data. Now that Data Republic's Data Sandbox product is available on AWS Marketplace, customers can quickly register for the platform.

Data Sandbox users can securely ingest de-identified data into the cloud-based platform, invite external innovators into a project, and conduct collaborative data analysis in a governed quarantined virtual machine.

"We want to help reduce the obstacles that prevent secure data sharing from happening in a scalable way. With Data Republic available on AWS Marketplace, existing AWS customers can reduce the time to onboard and get started with Data Republic's Data Sandbox," said Lynn Thompson, Head of Partnerships and Alliances at Data Republic.

"Data Republic is already a trusted platform for enterprise customers across financial services, insurance, and healthcare. We are excited to collaborate with AWS on this latest go-to-market channel and bring Data Republic to AWS customers via AWS Marketplace. Together we can help build the growing networked data sharing ecosystem for all enterprise organizations globally."

About Data Republic:

Data Republic enables enterprises to safely connect their most valuable data to the best people, apps, algorithms and data available. Data Republic's private-by-design platform is trusted by enterprise organizations in highly regulated industries to manage external data collaboration. Data Republic provides governed workflows, privacy-preserving matching, data license agreements and secure analytics workspaces. With Data Republic, every enterprise can rapidly scale the scope of their data strategy and launch data-driven projects in days, not months.

Data Republic has offices in Australia (HQ), Singapore and the USA, and is backed by top-tier corporate investors such as Westpac, Qantas Loyalty, NAB, Qualgro, ANZ, Singtel Innov8 and Singapore Airlines. Learn more about Data Republic at www.datarepublic.com
